Optimise

Max Sharpe beats Layla's current portfolio and fits her IPS.

Improve my portfolio | Build one for me | Frontier & strategy backtests

Run with Goal: **Maximise risk-adjusted return** | IPS limits: **≤ 30% per holding · vol ≤ 12% · GCC ≥ 10%** | Max turnover **30%** | Swaps **up to 3** | Edit & re-run

WHAT WE DID

Re-optimised 5 methods plus swaps within Layla's limits, tested month by month since Apr 2017 after costs.

WHAT WE FOUND

Max Sharpe beat her current walk-forward Sharpe by 0.19, with less volatility and a shallower fall.

WHAT WE RECOMMEND

Move to Max Sharpe. It ranks first under the rule and passes every IPS rule.

WHAT CHANGES

Sell 7.24% AGG and 3.19% GLD; buy 8.45% URTH and 5.43% BIL; 3 smaller changes. Turnover 30%.

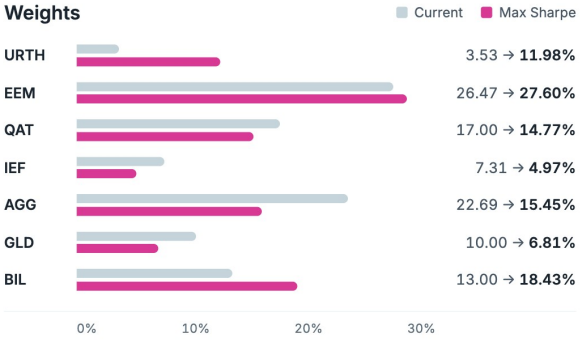

Current vs Max Sharpe

Walk-forward after costs, 05 Apr 2017 – 05 Nov 2026

Min variance	0.05 · 3.91% · −11.24%	Ranked lower
Re-weight + swaps	0.32 · 8.63% · −12.86%	✕ Didn't hold up out of sample

Reference: current portfolio 0.33 · 8.59% · −15.65%; 60/40 benchmark 0.64 · 11.28% · −21.72%. Status key: ✓ Recommended · ✕ Didn't hold up · ✕ Breaks limits · Ranked lower.

✓ Passes all 10 IPS rules | See Suitability · Explain the recommendation (AI memo)

Full results for analysts
Every walk-forward measure and today's weights for each candidate

Walk-forward charts
Growth of $1 for every candidate, and Max Sharpe's drawdown against the benchmark

Swap ideas
IEF and AGG move together; the swap rule sells IEF and keeps AGG. Max Sharpe only trims IEF to 4.97%.

Diagnosis: where the risk comes from
Holdings that move together and the current portfolio against 60/40

Walk-forward results are historical and risk-adjusted, not a forecast or a promise of higher returns.

Suitability

Review my portfolio

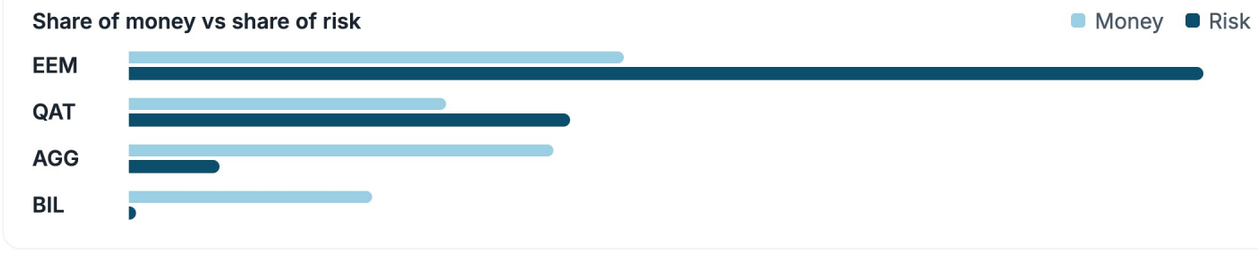

Portfolio review: Layla Haddad

Behind 60/40 on return, ahead on risk

Since Feb 2016 the portfolio returned 5.79% a year after costs, against 9.92% for 60/40. It was calmer: volatility 8.56% against 11.07%, and its worst fall was −15.80% against −21.72%. benchmark_compare

One holding drives most of the risk

EEM is 26.47% of the money but 57.50% of the risk; QAT adds another 23.58%. risk_contribution

What Optimise recommends

Max Sharpe raises the walk-forward Sharpe ratio from 0.33 to 0.52 within the 30% turnover limit, and passes all 10 IPS rules. optimise_result suitability

Audit trail: 4 tool calls

Ask a follow-up, e.g. 'What if I cut EEM to 15%?'

What-ifs here never change the recommendation or the client report.
